

Usability Testing — Session Summary

5 participants | Feedback organized by theme

Participants: Aiden Adithya Connor Nevaya Olivia

Theme	Feedback	Participants
Scrolling & Layout	- Container should stay fixed at top instead of scrolling when new content appears - Don't auto-scroll users to the bottom on updates - Results should appear at the top of the page - Live updates are randomly flashing at the top when refreshed	Aiden Connor Nevaya
Agent Conversation	- Collapse agent dialogue or provide a summarized version - Conversation should be shorter and not expanded by default - Avoid using 'AI Agents' as a label — many users don't know what agents are - Provide context/description for what each agent does - Split opinion: some users would read the full conversation, others would not	Aiden Adithya Connor Nevaya Olivia
Level Classification	- Users don't understand what the classification terms / levels mean - Word 'level' in descriptions was confusing (skill level vs. career level) - Wants the different levels explained; transparency with levels.fyi - Classification terms could be explained during the loading process - Too much text explaining why a level won; too many vague, repetitive bullet points	Aiden Adithya Connor Nevaya Olivia
Job Search Results	- Show one part of the job search process at a time; clarify the process timeline - User was suggested their own job; outdated link went to a generic careers page - Some users uncertain about what specific roles listed are - Doesn't know what 'active' means for a position; missed the end date - Would like more job options per level and ability to choose how many appear - Positive: liked 'you can get this job next week' framing	Aiden Connor Nevaya
Filters	- Filters (location, compensation, work style, company type) should be on the front/home page - Filters should be universal, similar to LinkedIn - Could add contextual suggestion filters further down the line	Aiden Connor
Evidence & Quotes	'Evidence from search' section may be redundant — the 'why' matters more	Aiden Adithya

	• Users unsure where quotes are sourced from • Likes the quotes; 'evidence from search' label could be rephrased	
Visual Design & UI	• Make percentage/progress bars more visually engaging with color • Colored border on the outside looks obviously AI-generated • Emojis: mixed reception — good agent indicator (Connor) vs. AI-feeling indicator (Aiden, Adithya) • Explore grid layout for job results • Code-based UI aesthetic and different fonts suggested • Side-by-side comparison view desired	Aiden Adithya Connor Nevaya Olivia
Career Trajectory	• Likes learning about where a career could go • Wants a job outlook / future summary instead of raw conversation • Doesn't care much about the trajectory information	Connor Nevaya Olivia
Positive Highlights	• Likes the breakdown shown while the resume is processing • Likes the specific choices of agents in the conversation • Job summary is presented clearly • Likes that the tabs are open already • 'Refine your results' feature well-received	Aiden Connor Olivia
